^a Expenditure at the most detailed level is the product of price and adjusted consumption, the latter is consumption adjusted to remove quantities of processed fuel and intermediate products and those obtained at no cost.

^b Distributed photovoltaic and solar thermal energy consumed in the commercial and industrial sectors that cannot be separately identified are included in residential consumption.

^c U.S. total energy and U.S. industrial sector include -21.6 trillion Btu of net imports of coal coke that is not allocated to the states.

^d U.S. total energy and U.S. industrial sector include -\$224.2 million of net imports of coal coke that is not allocated to the states.

Note: Totals may not equal sum of components due to independent rounding.

Sources: Data sources, estimation procedures, and assumptions are described in the Technical Notes.
