- (a) The Bureau of the Census classifies establishments using the North American Industry Classification System (NAICS).
- (b) A 'Local Utility' is an entity that produces and/or delivers a particular energy source (for example, electricity, natural gas, steam) and is legally obligated to provide service to the general public within its franchise area.
- (c) 'Sources Other than Local Utility' include independent producers, brokers, marketers, and marketing subsidiaries of utilities; for the case of electricity sources,
- also include small power producers and cogenerators not located at the establishment site.

 (d) Examples of Liquefied Petroleum Gases '(LPG)' are ethane, ethylene, propane, propylene, normal butane, butylene, ethane-propane mixtures, propane-butane mixtures, and isobutane produced at refineries or natural gas processing plants, including plants that fractionate raw Natural Gas Liquids '(NGL).'
- (e) Four components of 'Biomass' are collected: agricultural waste, wood harvested directly from trees, wood residues and byproducts from mill processing, and wood-related and paper-related refuse. The average price of 'Biomass Total' is computed as the sum of the dollar expenditures for those four components divided by the sum of the Btu quantities purchased of those four components.
- The 'Biomass Total' does not include pulping liquor or black liquor.

 (f) The price estimates for coal in NAICS 3313 and 331312 include anthracite coal for the production of carbon anodes. Due to the high cost of transporting anthracite from the
- East Coast to the South and West, the prices of coal in those regions are relatively high.

 NF=No applicable RSE row/column factor.
- * Estimate less than 0.5.
- W=Withheld to avoid disclosing data for individual establishments.

 Q=Withheld because Relative Standard Error is greater than 50 percent.

 S=Withheld because estimate did not meet publication standards.
- S=Withheld because estimate did not meet publication standards.

 NA=Not available.

 -- Estimation is not applicable.
- Notes: Totals may not equal sum of components because of independent rounding.

 Zeroes do not mean that the energy source is free, rather that the energy source either did not show up in this sample or it was not purchased at all in the sample population.

 Purchased energy sources exclude quantities delivered from any other establishment(s) in the company, quantities transferred from other establishments of the company for which payment was not made, quantities purchased centrally within the company but separate from the reporting establishment, and quantities for which payment was made in-kind.
- Source: Energy Information Administration, Office of Energy Consumption and Efficiency Statistics, Form EIA-846, '2010 Manufacturing Energy Consumption Survey.'
